

This training equips developers with the skills to extend and customize Cumulocity IoT's frontend applications, starting with a solid foundation in Cumulocity's architecture and domain model. Participants will master REST interfaces and learn to build custom Cumulocity applications while gaining deep insights into the platform's extension capabilities. The course culminates in practical knowledge of implementing and deploying extension packages, enabling developers to create tailored solutions that enhance Cumulocity's web-based user interface and functionality.

Duration: 4 hours

Achievements: Exam Pass Certificate

Learner Profile

- Frontend Developer with JavaScript/Angular experience

Required Knowledge

No requirements

Next Steps

- Cumulocity Expert courses

Learning Objectives

- Cumulocity Architecture
- Domain Model
- Introduction to REST
- Cumulocity Application
- Extension Packages
- Implementing Extension Packages

Activities

- Learning Videos & Demos
- Hands-On-Labs
- Exam
