

This training introduces Cumulocity Edge, our self-hosted version of the Cumulocity platform target for on-premise installations. With Cumulocity Edge you get almost all of the features our platform offers on a single machine. We will start with a short overview of what Edge is and how it fits into your environment. The rest of the training will then guide you through the different installation ways and show you the basic setup and configuration steps. In the end you should be able to connect a device to your own Edge instance.

Duration: 170 minutes

Achievements: Attendance Badge

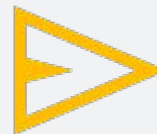

Learner Profile

Solution Architect
IT Administrator

Required Knowledge

Basic Cumulocity usage
Kubernetes (optional)

Next steps

Cumulocity Device
Integrator course

Learning Objectives

- Introduction
- Installation using c8yedge
- Installation using Kubernetes
- Accessing Edge
- Configuration
- Connecting Edge to Cloud

Activities

- Learning Videos & Demos

EXAMPLE

This training introduces Cumulocity, our robust platform for instant device connectivity and management. Short videos and hands-on labs in the free trial offer essential insights into remote asset management and analytics integration for improved business processes. Starting with an IoT overview, the course progresses with interactive sessions, optimizing learning via smartphone use. Labs provide detailed guidance, ensuring a smooth initial experience with minimal disruption

Duration: 170 minutes
