

Discover how to seamlessly integrate IoT data into favourite data lakes with Apache Parquet, the foundational building block of the open IoT data lake vision. This course provides a high-level overview of what Parquet is, features a practical demo to show the technology in action, and dives into its underlying technical mechanics. By the end of this training you will understand why Parquet matters, how it works, and how it compares to other similar technologies.

Duration: 17 minutes

Achievements: Attendance Badge

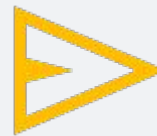

Learner Profile

Solution Architects
Data Analysts

Required Knowledge
