This learning covers the different possibilities of how to authenticate the Cumulocity server. It shows a possible KeePassXC integration and how to create tenants as well as users. Authentication settings are covered with basic authentication, oAuth2, TFA and SSO. We will see the special management tenant login and settings / emails for password reset / change. The module ends with the support user functionality and error handling.

Duration: 60 min

Achievements: Attendance Badge

Learning Objectives

- Basics – Login and Change Password
- KeePassXC Extension
- Tenant and Admin User Creation
- Authentication Settings
- Management Tenant Login Settings
- Emails for Password Reset and Change
- TFA – Two Factor Authentication
- Single Sign On
- Support User Access
- Errors and How to Solve Them

Activities

- Learning Videos & Demos

Learner Profile

- Solution Architect
- Integration Specialist
- Administrator

Required Knowledge

Cumulocity IoT Basic Understanding
